SPECIAL NOTES

API publications necessarily address problems of a general nature. With respect to particular circumstances, local, state, and federal laws and regulations should be reviewed.

API is not undertaking to meet the duties of employers, manufacturers, or suppliers to warn and properly train and equip their employees, and others exposed, concerning health and safety risks and precautions, nor undertaking their obligations under local, state, or federal laws.

Information concerning safety and health risks and proper precautions, with respect to particular materials and conditions, should be obtained from the employer, the manufacturer or supplier of that material, or the material safety data sheet.

Nothing contained in any API publication is to be construed as granting any right, by implication or otherwise, for the manufacture, sale, or use of any method, apparatus, or product covered by letters patent. Neither should anything contained in the publication be construed as insuring anyone against liability for infringement of letters patent.

Generally, API standards are reviewed and revised, reaffirmed, or withdrawn at least every 5 years. Sometimes, a one-time extension of up to 2 years will be added to this review cycle. This publication will no longer be in effect 5 years after its publication date as an operative API standard or, where an extension has been granted, upon republication. Status of the publication can be ascertained from the API Downstream Segment [telephone (202) 682-8000]. A catalog of API publications and materials is published annually and updated quarterly by API, 1220 L Street, N.W., Washington, D.C. 20005.

This document was produced under API standardization procedures that ensure appropriate notification and participation in the developmental process and is designated as an API standard. Questions concerning the interpretation of the content of this standard or comments and questions concerning the procedures under which this standard was developed should be directed in writing to the standardization manager, American Petroleum Institute, 1220 L Street, N.W., Washington, D.C. 20005. Requests for permission to reproduce or translate all or any part of the material published herein should also be addressed to the general manager.

API standards are published to facilitate the broad availability of proven, sound engineering and operating practices. These standards are not intended to obviate the need for applying sound engineering judgment regarding when and where these standards should be utilized. The formulation and publication of API standards is not intended in any way to inhibit anyone from using any other practices.

Any manufacturer marking equipment or materials in conformance with the marking requirements of an API standard is solely responsible for complying with all the applicable requirements of that standard. API does not represent, warrant, or guarantee that such products do in fact conform to the applicable API standard.

FOREWORD

This standard is a purchase specification for flanged steel pressure relief valves, including direct spring loaded pressure relief valves and pilot-operated pressure relief valves.

API publications may be used by anyone desiring to do so. Every effort has been made by the Institute to assure the accuracy and reliability of the data contained in them; however, the Institute makes no representation, warranty, or guarantee in connection with this publication and hereby expressly disclaims any liability or responsibility for loss or damage resulting from its use or for the violation of any federal, state, or municipal regulation with which this publication may conflict.

Suggested revisions are invited and should be submitted to the standardization manager, American Petroleum Institute, 1220 L Street, N.W., Washington, D.C. 20005.

Flanged Steel Pressure Relief Valves

1 General

1.1 SCOPE

This standard is a purchase specification for flanged steel pressure relief valves. Basic requirements are given for direct spring-loaded pressure relief valves and pilot-operated pressure relief valves as follows:

- a. Orifice designation and area.
- b. Valve size and pressure rating, inlet and outlet.
- c. Materials.
- d. Pressure-temperature limits.
- e. Center-to-face dimensions, inlet and outlet.

For the convenience of the purchaser, a sample specification sheet is given in Appendix A.

Nameplate nomenclature and requirements for stamping are detailed in Appendix B.

1.2 REFERENCED PUBLICATIONS

The latest edition or revision of the following standards, codes, and specifications shall, to the extent specified, form a part of this standard.

1.3 DEFINITIONS

Pressure relief valve terminology is defined in API Recommended Practice 520, Part I.

1.4 RESPONSIBILITY

The purchaser is primarily responsible for the following:

- a. Selecting the type of pressure relief valve and the required pressure-temperature ratings.
- b. Specifying materials that will satisfactorily resist corrosion from the process fluid and environmental conditions.
- c. Selecting the minimum required orifice area based upon relieving conditions derived from full knowledge of the pressure-relieving system and the requirements of the applicable codes and regulations.
- d. Providing data for sizing and selection.

The manufacturer is primarily responsible for the following:

- a. Designing and manufacturing pressure relief valves to satisfy the requirements of this standard and the purchaser's specification.
- b. Publishing relieving capacities based upon certified test data.
- c. Advising the purchaser of any nonconformance to the purchaser's specification.
- d. Final sizing verification using the manufacturer's actual orifice area and certified coefficient of discharge.

1.5 CONFLICTING REQUIREMENTS

Whenever the information included on the purchaser's specification sheet or purchase order conflicts with the provisions of this standard, the purchaser's specification sheet or purchase order shall govern. Where conflicting requirements exist, the manufacturer shall call them to the attention of the purchaser.

1.6 ORIFICE AREAS AND DESIGNATIONS

The standard effective orifice areas and the corresponding letter designations are listed in Table 1. These effective areas are valid only when used with the sizing equations contained in API RP 520, Part I.

³NACE International, P.O. Box 218340, Houston, Texas 77218.

2 Design

2.1 GENERAL

Pressure relief valves discussed in this standard shall be designed and manufactured in accordance with the applicable requirements of Section VIII of the ASME Boiler and Pressure Vessel Code for pressure relief devices.

2.2 DETERMINATION OF EFFECTIVE ORIFICE AREA

The minimum required effective orifice area shall be determined in accordance with API RP 520, Part I.

2.3 VALVE SELECTION

For valves described in this standard, inlet and outlet flange sizes and pressure-temperature ratings shall conform to the data in Tables 2 – 15 for spring-loaded valves and Tables 16 – 29 for pilot-operated valves. Inlet and outlet pressure limits are governed by the flange pressure/temperature limits or by the manufacturer's design limits, whichever is lower.

2.4 DIMENSIONS

Center-to-face dimensions shall be in accordance with Tables 2 – 15 for spring-loaded valves and Tables 16 – 29 for

pilot-operated valves, with tolerances of plus or minus $\frac{1}{16}$ in. for valve inlet sizes up to and including 4 in., and plus or minus $\frac{1}{8}$ in. for valve inlet sizes larger than 4 in.

Flange facings and dimensions shall be in accordance with ASME/ANSI B16.5.

For some valve designs, the inlet raised face height may substantially exceed the nominal dimension specified in ASME/ANSI B16.5. Consult the manufacturer for exact dimensions.

2.5 LIFTING LEVERS

Lifting levers shall be provided when required by the ASME *Boiler and Pressure Vessel Code* or when designated on the purchaser's specification sheet.

As allowed by the Code for pilot-operated pressure relief valves, means in lieu of lifting levers may be specified for connecting and applying adequate pressure to the pilot to verify that the moving parts critical to proper operation are free to move.

2.6 SPECIAL CONSTRUCTION FEATURES

Construction features beyond the scope of this standard shall be provided as agreed upon by the manufacturer and the purchaser and shall be designated on the drawings provided to the purchaser.

3 Material

3.1 GENERAL

Materials generally used for construction are covered in this section. For special corrosion problems and applications beyond the pressure-temperature limits of this standard, construction materials shall be those agreed upon by the manufacturer and the purchaser.

3.2 SPRING-LOADED PRESSURE RELIEF VALVES

The body, bonnet, and spring materials shall be in accordance with Tables 2 – 15 for the required temperature range. The body and bonnet may be of different materials but must meet the minimum pressure-temperature requirement. The body and bonnet materials shall be equivalent to or better than the following types and grades:

Carbon steel	ASME SA 216, Grade WCB
Chromium molybdenum steel	ASME SA 217, Grade WC6
Austenitic stainless steel	ASME SA 351, Grade CF8M
Nickel/Copper Alloy	ASME SA 494 Grade M35-1
Alloy 20	ASME SA 351 Grade CN7M

Material for the internal parts of the valve shall be in accordance with the manufacturer's standards for the temperature and service or as indicated on the purchaser's specification sheet.

3.3 PILOT-OPERATED PRESSURE RELIEF VALVES

The body material shall be in accordance with Tables 16 – 29 for the required temperature range. The body material shall be equivalent to or better than the following types and grades:

Carbon steel	ASME SA 216, Grade WCB
Austenitic stainless steel	ASME SA 351, Grade CF8M
Nickel/Copper Alloy	ASME SA 494, Grade M35-1
Alloy 20	ASME SA 351, Grade CN7M

Material for the pilot and internal parts of the valve shall be in accordance with the manufacturer's standards for the temperature and service or as indicated on the purchaser's specification sheet.

4 Inspection and Shop Tests

4.1 INSPECTION

The purchaser reserves the right to witness the shop tests and inspect the valves in the manufacturer's plant to the extent specified on the purchase order.

4.2 SET PRESSURE TEST

All pressure relief valves shall be adjusted to the specified set pressure in accordance with the ASME *Boiler and Pressure Vessel Code*, the manufacturer's standard practice as published, or as designated by the purchaser. All set pressure adjustments shall be sealed.

4.3 SEAT LEAKAGE TEST

All pressure relief valves shall be seat leakage tested in accordance with API Std 527, or as agreed upon by the manufacturer and the purchaser.

5 Identification and Preparation for Shipment

5.1 IDENTIFICATION

Each pressure relief valve shall have a corrosion-resistant nameplate permanently attached to the body or bonnet. This nameplate shall be stamped with the data specified in Appendix B. Pilot-operated pressure relief valves shall have an additional nameplate permanently attached to the pilot. The pilot nameplate shall be stamped with the manufacturer's name, pilot type, set pressure, and serial number.

Each pressure relief valve shall be tagged with the purchaser's valve number or other identification as specified on the purchase order. The data may be stamped on the nameplate or on a separate corrosion-resistant tag that is permanently attached to the valve.

5.2 PREPARATION FOR SHIPMENT

Each pressure relief valve shall be prepared for shipment as follows:

- After test and inspection, all exterior surfaces, except flange facings, shall be painted as agreed upon by the manufacturer and the purchaser. Corrosion-resistant materials need not be painted. Flange facings shall be coated with a suitable corrosion inhibitor.
- Threaded openings shall be plugged with suitable protective devices. Temporary plugs should be readily distinguishable from permanent metal plugs.
- Inlet and outlet flanges shall be protected to prevent damage from or entrance of foreign material during shipment.

Notes:

- Outlet pressure limit for temperatures above 100°F shall not exceed the rating in ANSI/ASME B16.34.
- Materials given are minimum requirements for the pressure and temperature ratings. Other suitable materials may be used, as required, for the service involved.
- Chrome alloy springs may be used above 450°F.
- Set pressure limited for low pressure applications where a Class 300 flange is preferred over a Class 150 flange.
- Material limited to 600°F. Pressure ratings indicated in the 451°F to 800°F column are limited to 600°F.
- Material limited to 300°F. Pressure ratings indicated in the 101°F to 450°F column are limited to 300°F.

Notes:

1. Outlet pressure limit for temperatures above 100°F shall not exceed the rating in ANSI/ASME B16.34.
2. Materials given are minimum requirements for the pressure and temperature ratings. Other suitable materials may be used, as required, for the service involved.
3. Chrome alloy springs may be used above 450°F.
4. Set pressure limited for low pressure applications where a Class 300 flange is preferred over a Class 150 flange.
5. Material limited to 600°F. Pressure ratings indicated in the 451°F to 800°F column are limited to 600°F.
6. Material limited to 300°F. Pressure ratings indicated in the 101°F to 450°F column are limited to 300°F.

Notes:

- Outlet pressure limit for temperatures above 100°F shall not exceed the rating in ANSI/ASME B16.34.
- Materials given are minimum requirements for the pressure and temperature ratings. Other suitable materials may be used, as required, for the service involved.
- Chrome alloy springs may be used above 450°F.
- Set pressure limited for low pressure applications where a Class 300 flange is preferred over a Class 150 flange.
- Material limited to 600°F. Pressure ratings indicated in the 451°F to 800°F column are limited to 600°F.
- Material limited to 300°F. Pressure ratings indicated in the 101°F to 450°F column are limited to 300°F.

Notes:

1. Outlet pressure limit for temperatures above 100°F shall not exceed the rating in ANSI/ASME B16.34.
2. Materials given are minimum requirements for the pressure and temperature ratings. Other suitable materials may be used, as required, for the service involved.
3. Chrome alloy springs may be used above 450°F.
4. Set pressure limited for low pressure applications where a Class 300 flange is preferred over a Class 150 flange.
5. Material limited to 600°F. Pressure ratings indicated in the 451°F to 800°F column are limited to 600°F.
6. Material limited to 300°F. Pressure ratings indicated in the 101°F to 450°F column are limited to 300°F.

Notes:

1. Outlet pressure limit for temperatures above 100°F shall not exceed the rating in ANSI/ASME B 16.34.
2. Materials given are minimum requirements for the pressure and temperature ratings. Other suitable materials may be used, as required, for the service involved.
3. Material limited to 300°F. Pressure ratings indicated in the 500°F column are limited to 300°F.

Notes:

1. Outlet pressure limit for temperatures above 100°F shall not exceed the rating in ANSI/ASME B 16.34.
2. Materials given are minimum requirements for the pressure and temperature ratings. Other suitable materials may be used, as required, for the service involved.
3. Material limited to 300°F. Pressure ratings indicated in the 500°F column are limited to 300°F.

**APPENDIX A—
PRESSURE RELIEF VALVE SPECIFICATION SHEETS**

INSTRUCTIONS

SPRING-LOADED PRESSURE RELIEF VALVE SPECIFICATION SHEET

**Line
No.**

1. Fill in item number.
2. Fill in user's pressure relief valve identification number.
3. Specify service, line, or equipment to be protected.
4. Specify number of valves required.
5. Specify the applicable Code(s) and whether Code Symbol nameplate stamping is required.
6. Valve should comply with API Std 526.
7. Check fire or specify other basis of selection.
8. Specify whether a rupture disk is being used under the valve inlet.
9. Specify whether valve is conventional, balanced bellows, and/or balanced piston.
10. Give description of valve inlet (full nozzle, semi-nozzle, or other type).
11. Specify open or closed bonnet.
12. Specify metal-to-metal or resilient seat.
13. If other than API Std 527, specify seat test requirements.
14. Specify pipe size of inlet, flange rating, and type of facing.
15. Specify pipe size of outlet, flange rating, and type of facing.
16. Specify type of connection if other than flanged (e.g., threaded, socket weld, etc.).
17. Specify material of body.
18. Specify material of bonnet.
19. Specify material of seat or nozzle and disk.
20. If a resilient seat is required, specify material.
21. Specify material of guide.
22. Specify material of adjusting ring or rings.
23. Specify material of spring and spring washer.
24. Specify material of bellows.
25. Specify material of balanced piston.
26. Materials selected should be listed in NACE MR0175.
27. Specify any other special material requirements.
28. Specify screwed or bolted cap.
29. Specify if the valve is to have a plain or packed lifting lever or none.
30. Specify whether a test gag is required.
31. Specify whether a bug screen in the bonnet vent of a bellows or balanced piston valve is required.
32. Specify other accessories that are required (e.g., limit switch).
33. Indicate flowing fluid and state (liquid, gas, or vapor).

34. Specify quantity of fluid that the valve is required to relieve at relieving conditions and unit of measure (such as pounds per hr, gal per min., or cu. ft. per min.).
35. Specify the molecular weight or specific gravity of the fluid at the flowing temperature.
36. Specify viscosity and unit of measure at the flowing temperature.
37. Specify operating pressure and unit of measure.
38. Specify set pressure and unit of measure.
39. Specify maximum blowdown as a percent of set pressure, if different than manufacturer's standard.
40. Specify the latent heat of vaporization and unit of measure.
41. Specify the operating temperature and unit of measure.
42. Specify the actual temperature at relieving conditions and unit of measure.
43. Specify the increase in pressure in the discharge header as a result of flow.
44. Specify the amount of superimposed back pressure that normally exists on the valve outlet and unit of measure. If back pressure is variable, specify the minimum and maximum.
45. Specify the set pressure at which the valve is adjusted to open on the test stand. The cold differential test pressure includes corrections to the set pressure for the service conditions of back pressure or temperature or both.
46. Specify the overpressure allowed, as a percent of set pressure or as a unit of measure.
47. Specify the compressibility factor, if used.
48. Give the specific heat ratio as $k_p = C_p/C_v$.
49. Specify the calculated orifice area, in square in.
50. Specify the selected effective orifice area in square in.
51. Specify the letter designation of the selected orifice.
52. Fill in the name of the manufacturer, if desired.
53. Fill in the manufacturer's model or type numbers, if desired.
54. Fill in the manufacturer's orifice area (in square in.) if desired.
55. Fill in the manufacturer's coefficient of discharge, if desired.
56. Confirmation of orifice sizing calculations required from vendor.

INSTRUCTIONS

SPRING-LOADED PRESSURE RELIEF VALVE SPECIFICATION SHEET

**Line
No.**

1. Fill in item number.
2. Fill in user's pressure relief valve identification number.
3. Specify service, line, or equipment to be protected.
4. Specify number of valves required.
5. Specify the applicable Code(s) and whether Code Symbol nameplate stamping is required.
6. Valve should comply with API Std 526.
7. Check fire or specify other basis of selection.
8. Specify whether a rupture disk is being used under the valve inlet.
9. Specify type of main valve operation.
10. Specify number of pilots per main valve.
11. Specify if pilot is flow or non-flowing type.
12. Specify type of action, pop or modulating.
13. Specify sensing point as integral at main valve inlet or at a remote location.
14. Specify metal-to-metal or resilient seat.
15. If other than API Std 527, specify seat tightness test requirements.
16. Specify if pilot venting is to atmosphere, valve outlet, or other closed system.
17. Specify pipe size of inlet, flange rating, and type of facing.
18. Specify pipe size of outlet, flange rating, and type of facing.
19. Specify type of connection if other than flanges (e.g., threaded, socket weld, etc.).
20. Specify material of body.
21. Specify material of seat or nozzle and piston.
22. Specify material of resilient seat (if required) and seals.
23. Specify material of piston seal.
24. Specify material of piston liner or guide.
25. Specify material of diaphragm or bellows.
26. Specify material of pilot body and bonnet.
27. Specify material of pilot internals.
28. Specify material of seat and seals of the pilot.
29. Specify material of diaphragm.
30. Specify material of tubing and fittings.
31. Specify material of filter body and cartridge.
32. Specify material of spring.
33. Materials selected should be listed in NACE MR0175.

34. Specify any other special material requirements.
35. Specify if external filter is required.
36. Specify if valve is to have a plain or packed lifting lever or none.
37. Specify if field test connection is required.
38. Specify if field test indicator is required.
39. Specify if backflow preventer is required.
40. Specify if manual blowdown valve is required.
41. Specify if test gag is required.
42. Specify other accessories that are required.
43. Indicate flowing fluid and state (liquid, gas, or vapor).
44. Specify quantity of fluid that the valve is required to relieve at relieving conditions and unit of measure (such as pounds per hr, gal per min., or cu. ft. per min.).
45. Specify the molecular weight or specific gravity of the fluid at the flowing temperature.
46. Specify viscosity and unit of measure at the flowing temperature.
47. Specify operating pressure and unit of measure.
48. Specify set pressure and unit of measure.
49. Specify the maximum blowdown as a percent of set pressure, if different than manufacturer's standard.
50. Specify the latent heat of vaporization and unit of measure.
51. Specify the operating temperature and unit of measure.
52. Specify the actual temperature at relieving conditions and unit of measure.
53. Specify the increase in pressure in the discharge header as a result of flow.
54. Specify the amount of superimposed back pressure that normally exists on the valve outlet and unit of measure. If back pressure is variable, specify the minimum and maximum.
55. Specify the set pressure at which the valve is adjusted to open on the test stand. The cold differential test pressure includes corrections to the set pressure for the service conditions of back pressure or temperature or both.
56. Specify the overpressure allowed, as a percent of set pressure or as a unit of measure.
57. Specify the compressibility factor, if used.
58. Give the specific heat ratio as $k_p = Cp/Cv$.
59. Specify the calculated orifice area, in square in.
60. Specify the selected effective orifice area in square in.
61. Specify the letter designation of the selected orifice.
62. Fill in the name of the manufacturer, if desired.
63. Fill in the manufacturer's model or type numbers, if desired.
64. Fill in the manufacturer's orifice area (in square in.), if desired.
65. Fill in the manufacturer's coefficient of discharge, if desired.
66. Confirmation of orifice sizing calculations required from vendor.

53. Built-up Back Pressure & Units:	59. Calculated Orifice Area (in square in.):
54. Superimposed Back Pressure & Units	60. Selected Orifice Area (in square in.):
55. Cold Differential Test Pressure & Units:	61. Orifice Designation (letter):
56. Allowable Overpressure in Percent or Units:	62. Manufacturer:
57. Compressibility Factor, Z:	63. Model Number:
58. Ratio of Specific Heats:	64. Manufacturer's Orifice Area (in square in.):
	65. Manufacturer's Coefficient of Discharge:
	66. Vendor Calculations Required: Yes [] No []

Note: Indicate items to be filled in by the manufacturer with an asterisk (*).

APPENDIX B— PRESSURE RELIEF VALVE NAMEPLATE NOMENCLATURE

Nomenclature	Description
Manufacturer's name or identifying trademark	Identification of manufacturer
Size	Nominal pipe size, inlet by outlet
Type, style, model, or figure no.	Manufacturer's designation
Orifice	Valve orifice size, standardized letter designations
Capacity at 10% overpressure	Pounds per hour of saturated steam, standard cu. ft. per min. of air, at 60°F and 14.7 psia or U.S. gal per min. of water at 70°F
Serial no. or shop no.	Manufacturer's identification
Set pressure, pounds per square in. gauge	Valve inlet pressure at which the pressure relief valve is adjusted to open under service conditions
Back pressure, pounds per square in. gauge	Constant (For example, 50 psig) Variable (For example, 0 – 50 psig)
Cold differential test pressure, pounds per square in. gauge (if applicable)	The pressure at which the pressure relief valve is adjusted to open on the test stand. The cold differential test pressure includes corrections to the set pressure for the service conditions of back pressure or temperature or both (See examples below)

Example 1—Conventional Valve

Set pressure, psig	200
Back pressure, psig	Atmospheric (or 0)
Temperature, °F	400
Cold differential test pressure, psig	200 + manufacturer's recommended temperature correction

Example 2—Balanced Bellows Valve

Set pressure, psig	200
Back pressure, psig	50, or 0 – 50
Temperature, °F	400
Cold differential test pressure, psig	200 + manufacturer's recommended temperature correction

Example 3—Conventional Valve

Set pressure, psig	200
Back pressure, psig	50, constant superimposed
Temperature, °F	400
Cold differential test pressure, psig	200 – 50 + manufacturer's recommended temperature correction

2002 Publications Order Form

Available through Global Engineering Documents.

Effective January 1, 2002.

Phone Orders: 1-800-854-7179 (Toll-free in the U.S. and Canada)
303-397-7956 (Local and International)
Fax Orders: 303-397-2740

Shipping and Handling (see below)	
Total (in U.S. Dollars)	

★ To be placed on Standing Order for future editions of this publication, place a check mark in the SO column and sign here:

Pricing and availability subject to change without notice.

Mail Orders – Payment by check or money order in U.S. dollars is required except for established accounts. State and local taxes, \$10 processing fee*, and 5% shipping must be added. Send mail orders to: **API Publications, Global Engineering Documents, 15 Inverness Way East, M/S C303B, Englewood, CO 80112-5776, USA.**

Purchase Orders – Purchase orders are accepted from established accounts. Invoice will include actual freight cost, a \$10 processing fee*, plus state and local taxes.

Telephone Orders – If ordering by telephone, a \$10 processing fee* and actual freight costs will be added to the order.

Sales Tax – All U.S. purchases must include applicable state and local sales tax. Customers claiming tax-exempt status must provide Global with a copy of their exemption certificate.

Shipping (U.S. Orders) – Orders shipped within the U.S. are sent via traceable means. Most orders are shipped the same day. Subscription updates are sent by First-Class Mail. Other options, including next-day service, air service, and fax transmission are available at additional cost. Call 1-800-854-7179 for more information.

Shipping (International Orders) – Standard international shipping is by air express courier service. Subscription updates are sent by World Mail. Normal delivery is 3-4 days from shipping date.

Rush Shipping Fee – Next Day Delivery orders charge is \$20 in addition to the carrier charges. Next Day Delivery orders must be placed by 2:00 p.m. MST to ensure overnight delivery.

Returns – All returns must be pre-approved by calling Global's Customer Service Department at 1-800-624-3974 for information and assistance. There may be a 15% restocking fee. Special order items, electronic documents, and age-dated materials are non-returnable.

***Minimum Order** – There is a \$50 minimum for all orders containing hardcopy documents. The \$50 minimum applies to the order subtotal including the \$10 processing fee, excluding any applicable taxes and freight charges. If the total cost of the documents on the order plus the \$10 processing fee is less than \$50, the processing fee will be increased to bring the order amount up to the \$50 minimum. This processing fee will be applied before any applicable deposit account, quantity or member discounts have been applied. There is no minimum for orders containing only electronically delivered documents.
